

CHANCELLOR WRIGHT INTRODUCES "DATA AND DECISIONS" TO DELGADO

Chancellor Ron D. Wright, Ph.D., has joined the ranks of other community college leaders in recognizing how important evidence is to supporting the work of higher education, not only for ongoing improvement efforts, but for survival in an uncertain economic climate.

Operating as a "culture of evidence" means keeping all academic programs, departmental initiatives, functional areas, etc. in business by understanding and using data to support decisions and drive planning.

Dr. Wright has assigned a team of four administrators (Arnel Cosey, Tim Stamm, Cathy Sarrazin and Angela Breckenridge) to serve as resources for the college as we learn about this approach and get smarter with using data to our advantage.

In the coming months, Delgado faculty and staff will have opportunities to learn about how to integrate this critical business practice into the work they do every day.

Delgado faculty and staff can access the "Data and Decisions" manual on the Faculty/Staff Intranet and the "Data and Decisions" BlackBoard site for news and upcoming training schedules.
