## DIY Disinfecting Wipes

It has been a challenge shopping for disinfecting wipes. Here's a do-it-yourself option:

### Ingredients

- 2 cups Distilled Water
- 1 cup isopropyl alcohol at least 70-91% concentration
- 1 TBSP Dawn dish soap
- 3 drops tea tree oil (option)
- 1 Paper Towel Roll

### Instructions

1. Cut your paper towel roll through the middle with a serrated knife.
2. Flip them over and stick into a jar or previous Lysol/Clorox wipes box (or a pitcher from the dollar store).
3. Mix together the water, rubbing alcohol and dawn dish soap.
4. Pour around the edges of the paper towel roll. Let it soak in for 2 minutes.
5. Pull the middle paper towel roll out and throw away. Now you can pull from the middle.
6. Store in a closed container with lid.
